please do not hesitate to get in touch with us by phone, e-mail or visit our website and follow us on social media.

## Soaps

Soap is a traditional washing compound made from oil fats and caustic alkali. It is an item of daily necessity as cleaning agent. There are few specialty soaps like the washing soap especially laundry bar soaps, medicated soaps, toilet soaps and baby soaps. Population growth especially households with children has a proportional impact on the growth of the manufacturing sector of the industry. Soap is undoubtedly the oldest product to be produced specifically as a surfactant and in its many forms continues to play a major role today. With a high competitive market place soap is presented in a multitude of forms both solid and liquid. The overall soap industry is worth 600,000\$. Uganda with a huge population has a household penetration of soap at 98%.

## Detergents

Disinfectants are antimicrobial agents with the ability to destroy harmful microorganisms such as fungi, virus, and bacteria. There are various types of disinfectants available in the global market, which include oxidizing agents, phenolic, quaternary ammonium compounds, and aldehydes.

The disinfectant market is driven by the general consciousness to disinfect surroundings and live healthy. The recent outbreaks of COVID-19 and other infectious diseases in different parts of the world, have triggered the use of disinfectants all over Uganda. The initiatives of cleaning and disinfecting surroundings to contain such outbreaks of fatal diseases have been on the rise, with the government promoting disinfection in all public places and individual homes. At Evergreen Detergents Manufacturers is keen at producing the best quality disinfectants in the Uganda market.

At Evergreen Detergents Manufacturers is keen at producing the best quality disinfectants in the Uganda market.

## Briquettes

Briquettes are an alternative fuel source that is currently gaining popularity in Uganda, which have also been successfully integrated into the economy in other developing countries such as China and Thailand. Biomass briquettes are a form of solid fuel that can be burned for energy. They are created by compacting loose biomass residues into solid blocks that can replace fossil fuels, charcoal and natural firewood for domestic and institutional cooking and industrial heating processes.

Briquettes have the potential to be a source of renewable energy if they are made from sustainably harvested biomass or waste agricultural residues. Crops grown in Uganda such as maize, cereals, roots, cane sugar and coffee all produce residues that are suitable for briquetting as does dried organic municipal solid waste (MSW). Data provided by the Ugandan government indicates that 1.2 million tons of agricultural wastes are available each year and an additional 1,500 tons of MSW are estimated to be produced in the capital city Kampala daily. These two sources combined provide a theoretical limit which indicates that at most 6% of the country's total wood consumption and up to 50% of the charcoal trade could be replaced by briquettes from waste. At Evergreen Detergents Manufacturers, we vigorously take lead in manufacturing these source of renewable energy.

## Energy Charcoal Stove

In Uganda, dependence on wood fuel has caused significant depletion of vegetative resources. Whereas there exist hundreds of improved cooking stoves, focused on either fuel efficiency or reduced smoke.

Energy Charcoal Stove is a single-pot improved charcoal cooking stove with a clay inner lining and galvanized metal cladding designed with efficient airflow.

## Community and Youth Empowerment

In Uganda, the challenges to becoming an entrepreneur or industrialist are immense for young people. Formal education does not address the practical know-how needed in order to gain experiences and to build up a small scale manufacturing business. Evergreen Detergents Manufacturers creates perspectives for young people who are essential for the development of rural communities, and for the future of industrialization development in Uganda. Evergreen Detergents Manufacturers recognizes that youth unemployment is a crippling dilemma in Uganda. Estimates indicate that only a fraction of graduates in Uganda with some form of qualification get absorbed in the limited job market with at least 400,000 graduating each year. Unfortunately, projects registered by the Uganda Investment Authority indicate that only 150,000 jobs are created annually leaving the biggest percentage unemployed. On the other hand there is a big fraction of the youth who do not have an opportunity to attain University education and lack usable skills. The youth unemployment in Uganda is above 60% rated among the highest in the whole world. Evergreen Detergents Manufacturers skills the youth in a variety of aspects as a way of reducing youth unemployment paying special attention to industrialization skills and networks. Evergreen Detergents Manufacturers is one among the actors who seek to solve the youth unemployment problem.

## Building Networks

Evergreen Detergents Manufacturers strives to strengthen communication and consultation within the landscape of actors and the communities that are being served. We strive to strengthen co-operation with partners.
